

Case Study

Pride Sports

Air Compressor Lubricant

- Largest global designer, manufacturer and distributor of replaceable sport and industrial cleats and other golf accessories
- This location prints custom names and logos on the golf tees
- Using an Amsoil lubricant in two Kaeser machines: SFC 30S and ASD 30

The Problem:

- Compressor was running hot
- Compressor not holding pressure
- Significant oil carryover problems:
 - » Competitor oil was getting into the dryer, causing production issues
 - » Oil was also plugging up the oil cooler

MM Industrial Sales' Solution

Universal Air Compressor Lubricant

Universal Air Compressor Lubricant offers superb resistance against water contamination and an extended service life of more than 10,000 hours. Its high oxidative resistance keeps the oil cooler from getting plugged up and resists buildup of carbon deposits on rotating components. Universal Air Compressor Lubricant's enhanced energy savings prevents the fluid from becoming thicker, keeping energy consumption to a minimum.

The Results

Up to 20° temperature drop & no oil in the dryers

Pride Sports transitioned their Amsoil fluid to Universal Air Compressor Lubricant. They simply drained the Amsoil, changed the filters and put in Universal Air Compressor Lubricant. There was no flush treatment necessary.

After starting the machines back up and running them to operating temperature, the machines are running 15-20° cooler and holding constant pressure at 7-10 more PSI.

In addition, Universal Air Compressor Lubricant fixed the oil leaking out of the filters and are not seeing any oil in the dryers. The customer's issues were resolved.

Reduced carryover,
no oil in the dryers

Machines running
up to 20° cooler

Fluid properties are typical results and should not serve as a sole resource for determining the correct fluid for a particular application. Please consult a MM Industrial representative to ensure that the product is the correct choice for the application. Revised 05/2018
